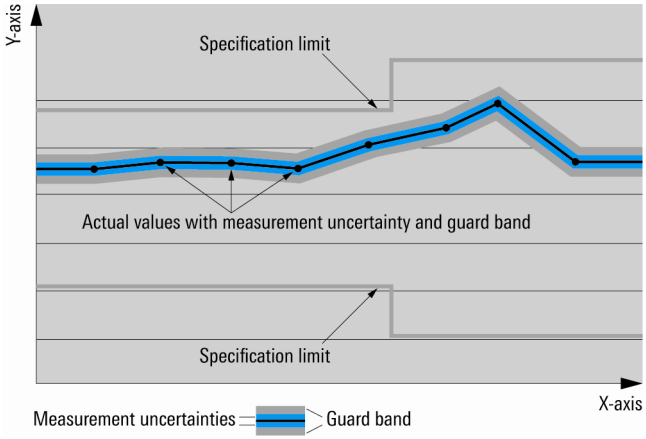
General
Product data applies under the following conditions:

- Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- Specified environmental conditions met
- Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable

Specifications with limits
Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as <, ≤, >, ≥, ±, or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.



Specifications without limits
Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

Typical data (typ.)
Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)
Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)
Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties
Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

Elementary stream analyzer (R&S®DV-ESA)

Software package for detailed offline analysis of video elementary streams.

Simple automated software call for the elementary stream elements selected in the R&S®DVM GUI (TS tree).

For more details, refer to the R&S®DVQ-B1 Quality Explorer Suite data sheet, section “Elementary Stream Analyzer”.

H.264 and Dolby analysis

Software package for detailed offline analysis of video and audio elementary streams with the following options:

H.264 analyzer (R&S®DVM-K200)

Dolby AC-3 audio (R&S®DVM-K201, option for H.264 analyzer)

Supports Dolby AC3, Dolby Digital Plus, Dolby E.

Maintenance for 12 months (R&S®DVM-K209, option for H.264 analyzer)

Video coding analysis – qPSNR (R&S®DVM-K31)

This software option measures the quasi-peak signal-to-noise ratio of MPEG-2 and H.264 video streams in SD or HD resolution. This single-ended measurement is performed in order to analyze the video coding quality.

Features		
Graphical display of qPSNR versus time and history diagram		
Automatic recording of measured video stream if set qPSNR limit is violated		
Replay of recorded video streams		by: • integrated software player with R&S®DVM50/R&S®DVM100L/ R&S®DVM400 (MPEG-2 only) • TS generator with R&S®DVM400 and installed R&S®DVM400-B2 option
Save and load of qPSNR analysis data		containing: • qPSNR values versus time • limit violation descriptions • recorded video streams

Video and audio decoding

The R&S®DVM-K1 TS monitoring option allows MPEG-2 SD and HD programs to be decoded and displayed. The results are displayed in a separate GUI window.

The following hardware decoder options allow MPEG-2-coded and H.264-coded SD and HD video signals to be decoded. Audio decoding is also supported. Various interfaces are available to connect external displays. Descrambling is supported via the common interface of the R&S®DVM-B1. Using the R&S®DVM400-B500 option, the decoded picture and the decoded sound can be output directly on the R&S®DVM400; no additional accessories are required.
